REASONS FOR ALLOWANCE

Information Disclosure Statement

1. The information disclosure statement (IDS) submitted on 14 September 2005 (09/14/2005) is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

Allowable Subject Matter

2. Claims 1-6, 8-25 and 27-39 are allowed.

3. The following is an examiner's statement of reasons for allowance:

RE claim 1, the prior art of record, and in particular Ottensen et al (USPN 6,560,054), fails to teach or suggest a method comprising selecting a spin motor index associated with a circumferential position about the motor based upon the measured times between FCOM pulses using a predetermined criteria, wherein a predetermined number of FCOM pulses are associated with one revolution of the motor and measurements are taken between the predetermined number of FCOM pulses associated with one revolution of the motor.

RE claim 21, the prior art of record, and in particular Ottensen et al (USPN 6,560,054), fails to teach or suggest a disk drive comprising circuitry for selecting a spin motor index associated with a circumferential position about the motor based upon the measured times between FCOM pulses using a predetermined criteria, wherein a predetermined number of FCOM pulses are associated with one revolution of the motor and measurements are taken between the predetermined number of FCOM pulses associated with one revolution of the motor.

RE claim 34, the prior art of record, and in particular Ottensen et al (USPN 6,560,054), fails to teach or suggest a method comprising deriving a circumferential position about the motor in the absence of reading said servo sector index stored on the disk surface, wherein said circumferential position is derived using mechanical tolerances in constructing at least one of the rotor and the stator.

RE claims 35-36, the prior art of record, and in particular Ottensen et al (USPN 6,560,054), fails to teach or suggest a method and associated disk drive comprising selecting a spin motor index associated with a circumferential position about the motor based upon the measured times between FCOM pulses using a predetermined criteria; providing a disk surface having a landing zone thereon; providing a transducer operable to be loaded over and unloaded from the disk surface; providing a ramp for parking the transducer when unloaded from the disk surface; using the servo index when loading the transducer over the disk surface from the ramp, wherein the landing zone does not extend around the entire circumference of the disk surface.

4. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
